

Northfield Engineering breaks new ground in the Western Cape

Northfield Engineering, a company established 76 years ago in Port Elizabeth, has taken the strategic decision to replicate its current business model together with its service offerings and expand into the Western Cape as from 01 November 2025. The new company, aptly named Northfield Engineering WC, will be based in Bonnievale, Robertson and Cape Town. Northfield Engineering is amongst the market leaders in the Agricultural, Municipal and Industrial economic sectors.

Specialising in steel fabrication, pipefitting, mechanical installations, pump repairs as well as rigging and machine moving, Northfield Engineering is excited about embarking on this new journey into the Western Cape. Well known for its product offerings in the aforementioned sectors, Northfield Engineering prides itself on offering great customer service, solutions that solve client's challenges and the building of relationships with its valuable customer base.

Northfield Engineering is the official agent for the highly respected pump brands of Wilo, Gorman Rupp, KSB and Grundfos, amongst others.

Together with the above, a fully functioning pipefitting workshop is already operational in Bonnievale.

A dedicated Western Cape sales and administrative office will also be opened in Robertson at the beginning of 2026.

Northfield Engineering WC will be headed up by General Manager, Carel Greyling. Carel previously headed up the Industrial Support Division for Northfield Engineering in the Eastern Cape and comes with a wealth of experience, dedication and commitment to industry and its clients. He will be supported by a dedicated team with many years of experience in the fields of fluid transfer, fabrication, pipe fitting, machine moving and rigging.

Shelley Woolf also joined Northfield Engineering WC on 01 November as Sales Manager: Rigging Division and brings with her a vast amount of expertise in the Rigging/Machine Moving & Abnormal Transport field. Northfield Engineering WC prides itself with its crane mounted truck fleet and promises to deliver affordable, efficient and professional services to all clients in the Western Cape.

Northfield Engineering is already involved in several exciting projects in the Western Cape which prompted the move to establish a permanent company in the province.

“We have been incredibly well received at all the sites we are currently working on in the Western Cape,” said Northfield Engineering Managing Director Robert Archibald. “It was a natural progression to get to this point where we’ve now registered our Western Cape operations as a totally separate entity.”

Mr Archibald said Northfield Engineering Western Cape was looking forward to making a valuable contribution to a province already renowned for its good governance and sound economy. “We have identified Cape Town and surrounding areas as the part of the province in which we will be focussing our rigging services.”
